Week 2 - Core - Worksheet | AI Systems Understanding - Understanding the System

Name: _____ **Class:** _____ **Date:** _____

Map the system

For the worked example your teacher showed, fill in the input, the components in between, and the output.

Part of the system	What it was in the worked example
Input	
Data (what the tool learned from)	
Tool (what it does)	
Prompt (what steered it)	
Output	

Explain the interaction

Write two or three sentences explaining how the components interacted to turn the input into the output. Use because or so.

_____

_____

_____

_____

Spot the component

Read each line and write which component it describes: data, tool or prompt.

Line from a worked system	Which component?
The thousands of labelled photos it was trained on	
The instruction 'give a hint, not the answer'	
The part that matches the item to a material	

Exit ticket

Describe in two sentences how one AI system uses its input to generate an output, and name one component that shaped the result.

_____

_____

Challenge (stretch)

Challenge (stretch) - Explain how the data, the tool and the prompt interact within one solution you know. Which interaction would you design most carefully to keep the output reliable, and why? Use the word component.

_____

_____
